## 5 Performance Criteria and Methods of Observation

Definition of General Performance Criteria	
Referenced Standard:	IEC 60945:2002
Common Requirements:	The equipment shall not become dangerous or unsafe as a result of the application of the tests defined in this standard.
<i>Performance criterion</i>	<i>Specification</i>
A	The equipment shall continue to operate as intended without interference of the operator. No degradation of performance or loss of function is allowed below a performance level specified by the manufacturer when the equipment is used as intended. In certain cases the minimum performance level may be replaced by a permissible loss of performance. If the minimum performance level or the permissible performance loss is not specified by the manufacturer then either of these may be derived from the product description and documentation and what the user may reasonably expect from the equipment if used as intended.
B	The equipment shall continue to operate as intended after the test without interference of the operator. After test no degradation of performance or loss of function is allowed below a performance level specified by the manufacturer when the equipment is used as intended. The minimum performance level may be replaced by a permissible loss of performance. During the test, degradation of performance is however allowed. After test no change of actual operating state or stored data is allowed. If the minimum performance level or the permissible performance loss is not specified by the manufacturer then either of these may be derived from the product description and documentation and what the user may reasonably expect from the equipment if used as intended.
C	Loss of function is allowed, provided the function is self recoverable or can be restored by the operation of the controls in accordance with the instructions of the manufacturer. Functions and/or data not stored in temporary memory or protected by a backup battery may not be lost.
